CYPRUS

Cyprus (8.1 m x 6.6 m) is our 1 bedroom cabin with a large veranda at the front. Cabin is perfect for people looking for a larger extra room in their backyard or a holiday property. Perfect granny flat to keep your family close or build it for rent as a money generating asset. Pre-cut flat packed kits come conveniently on pallets and a granny flat can be assembled in 3 days saving your money and time in building process. Natural timber and double glazing will provide comfortable living and a piece of mind for health and sustainably-minded people.

FLEXIBLE FLOOR PLAN AND BUILDING DESIGN

Floor plan can be mirror reversed during installation
Windows marked red on the floor plan can be placed in your preferred location during installation
Choose double french or tilt and slide doors
Customize the height of the building
Add more windows
Alter windows size

We can make any structural changes to our architecturally designed range of granny flats or we can even make your own design come to life!

WHY SCANDINAVIAN GRANNY FLATS?

Europeans are leading the way with energy efficient houses built using wood and other ecological materials. As energy prices predicted to rise substantially in the next 20 years, we offer stylish, energy efficient and eco-friendly buildings that will please you in the years to come. YZY granny flats are designed with ingenious Scandinavian building structure paired with top-performing German window and door systems.

STYLISH, ENERGY EFFICIENT AND ECO-FRIENDLY BUILDINGS

YZY Kit Homes' tongue and groove interlocking design system creates a strong, secure and draft-free living. Solid timber walls made of milled logs provide both structure and insulation. Solid timber walls act like "thermal batteries" and can store heat during the day and gradually release it at night. This generally increases the apparent R-value (3.5) of a solid timber by 0.24 per 60 mm of thickness in climates that have a substantial temperature swing from day to night. Because of the log's heat storage capability, its large mass result in better overall energy efficiency.

Our Granny Flats rated with The Nationwide House Energy Rating Scheme (NatHERS)

7 star rating in ACT
Greenland with external
cladding

6.2 star rating in NSW
Central Coast
Cyprus

TOP-PERFORMING AND ENERGY EFFICIENT GERMAN WINDOWS

YZY Kit Homes' windows rated 7 stars were the top performers compared to other uPVC window manufacturers (Updated 30-Nov-17) WERS Certified Products Directory

YZY Granny Flats and Kit Homes feature top-performing double glazed windows with German made REHAU window and door systems. Every REHAU profile is strictly produced according to the most stringent German engineering guidelines, with the company certified to ISO 9001 standards, meet international quality and regulatory standards, and are accredited by both international and national regulation bodies.

With windows made from REHAU profiles, the heat stays outside the building - thanks to their very good thermal insulation properties. That ensures not only a comfortable living climate, but also lower cooling bills from air conditioning and significantly reduce CO2 emissions. Windows made from REHAU profiles are used in low energy houses.

BENEFITS - REHAU Double Glazed doors and windows

LOWER COOLING COSTS

While frames made of aluminium or any other metal tend to scorch, REHAU uPVC is a very poor conductor of heat preventing the heat outside from entering your home, thereby reducing your reliance on cooling devices such as air conditioning.

DESIGNED FOR EXTREME UV ENVIRONMENTS

REHAU uPVC Windows and Doors are specially developed to protect the profiles against hard UV-radiation found in many parts of Australia and New Zealand. Special formulation protect against discolouring, distortion and shrinkage of the profiles due to extreme conditions in hot environments and high UV climates.

SILENCE INSIDE YOUR HOME

REHAU multi-chambered profile provides effective sound insulation.

PERFECT PROTECTION AGAINST THE ELEMENTS

The two sealings in REHAU Window Systems protect against the elements: dust, wind and rain. Sealings are calibrated to achieve excellent air tightness of less than 0.1 m³/hr/m² @ 10 Pa. A higher than average surface gloss level of window frames repel dirt - ideal for fuss-free maintenance.

SECURITY FOR YOUR FAMILY AND PROPERTY

When typical windows are opened, burglars can easily enter your property by just removing mosquito nets. With tilted windows there is no easy break in. Closed windows and doors firmly lock at multiple points anchoring with multi-locking hardware.

SELF EXTINGUISHING

REHAU uPVC is classified as a high-impact resistant material. It is notably difficult to ignite and will self-extinguish when the source of heat is removed.

RECYCLABLE AND ECO FRIENDLY

PVC is easily chipped into waste material and extruded into new products. Because PVC is lightweight, it uses less fuel to transport.

	uPVC	Wood	Aluminum
Thermal Insulation (W/m ² K)	1.7	2.0	5.7
Thermal Conductivity (W/m.K)	0.21	0.3	210

Arrows indicate comparisons: uPVC is 3 times better than Wood for Thermal Insulation, and 1000 times better than Aluminum for Thermal Conductivity.

This thermal image demonstrates how effectively the tilt-turn window design separates warmer air and cooler air for optimal energy efficiency.
